

Test Case 1001

System: Townie Phase: 1

System Startup

Severity: 1

Instructions:

- 1) At the console, enter “npm run start” in the Townie directory.

Expected Result:

- 1) The Townie log-in page should appear when going to the website given by the Svelte client.
- 2) The log-in boxes should function appropriately.

Test Case 1002

System: Townie Phase: 1

User Log-In without an Account

Instructions:

- 1) Start the system (see Test Case 1001, instruction 1).
- 2) Enter a username and password that does not exist in our database.

Expected Result:

- 1) The user is prompted with a message saying “This user does not exist”.
- 2) The user is returned to the log-in screen.

Test Case 1003

System: Townie Phase: 1

User Log-In with an Account

Instructions:

- 1) Start the system (see Test Case 1001, instruction 1)
- 2) Enter a username and password that does exist in our database.

Expected Result:

- 1) The user is logged into their account and sent to the homepage for Townie.
-

Test Case 1004

System: Townie Phase: 1

User Account Creation with Information Already In Use

Instructions:

- 1) Start the system (see Test Case 1001, instruction 1)
- 2) Select "Sign Up" from the log-in screen.
- 3) Enter a username that already belongs to a user, and select "Sign Up"

Expected Result:

- 1) The user is prompted with a message that this username is already in use.
 - 2) The user is prompted to enter a new username.
-

Test Case 1005

System: Townie Phase: 1

User Account Creation with Unique Information

Instructions:

- 1) Start the system (see Test Case 1001, instruction 1)
- 2) Go to the account creation page (see Test Case 1004, instruction 2)
